

Assignment: Snowflake Warehouse Management

Objective

The objective of this assignment is to learn how to create and manage virtual warehouses in Snowflake. This includes creating a warehouse with specific configurations and resizing it according to workload requirements.

Task 1: Create a Virtual Warehouse

SQL Command

```
CREATE WAREHOUSE my_warehouse  
WITH  
WAREHOUSE_SIZE = 'XSMALL'  
AUTO_SUSPEND = 60  
AUTO_RESUME = TRUE;
```

Explanation

- **WAREHOUSE_SIZE = 'XSMALL':** Creates the warehouse with an Extra Small size.
- **AUTO_SUSPEND = 60:** Automatically suspends the warehouse after 60 seconds of inactivity to reduce costs.
- **AUTO_RESUME = TRUE:** Automatically resumes the warehouse when a query is submitted.

Task 2: Resize the Warehouse

SQL Command

```
ALTER WAREHOUSE my_warehouse  
SET WAREHOUSE_SIZE = 'MEDIUM';
```

Explanation

- The **ALTER WAREHOUSE** command modifies the existing warehouse configuration.

- WAREHOUSE_SIZE = 'MEDIUM' increases the warehouse size from XSMALL to MEDIUM.
- Resizing provides additional compute resources for handling larger workloads.

Expected Result

The warehouse my_warehouse is resized successfully to MEDIUM.

Conclusion

In this assignment, a Snowflake virtual warehouse was created with automatic suspend and resume settings. The warehouse was then resized from XSMALL to MEDIUM to accommodate increased processing requirements. These operations demonstrate basic warehouse management tasks in Snowflake.
